Just because you feel that giving a weather broadcast is regionalized doesn't mean it is. I use the weather/traffic stations as I travel from Pittsburgh so I can know the weather ahead of time and check the traffic as I get closer to my destination. So those stations are used by others who are NOT local citizens of the region or city. Maybe if we didn't hear the same thing on free broadcasts every 1/2 hour and on every station on the dial we wouldn't want to pay for a variety of good radio programming.
